Leo

Leo furniture series is the result of collaboration between IOA-HCF and internationally-renowned architecture firm, **Leo A Daly**, who understands that as global healthcare changes, so does patient expectations of healthcare environments.

Together, we designed a furniture group that recognizes a major convergence between hospitality and healthcare design. Our collaborative focus was creating public spaces that have a perception of being comfortably reassuring when patients are introduced into wellness settings. The vital goal in the design process was to leave behind a cold, sterile seating environment and replace it with attractively welcoming pieces that could easily crossover between healthcare and hospitality applications.

Essentially, Leo's transitional aesthetics translate to a new classical appearance with a modern sensibility. Sleek lines, appropriate human-scaling, along with comfortable proportions undoubtedly sets Leo apart from traditional wait-seating furniture. Ultimately, Leo provides patients with the initial impression of a hospitality aesthetic and provides supportive elements which humanize the healthcare environment.

Recovery begins with a positive mindset.
